

More complementary observations, at the cost of more travel and scans

R12: 22 stations
3,522.5 s pure movement

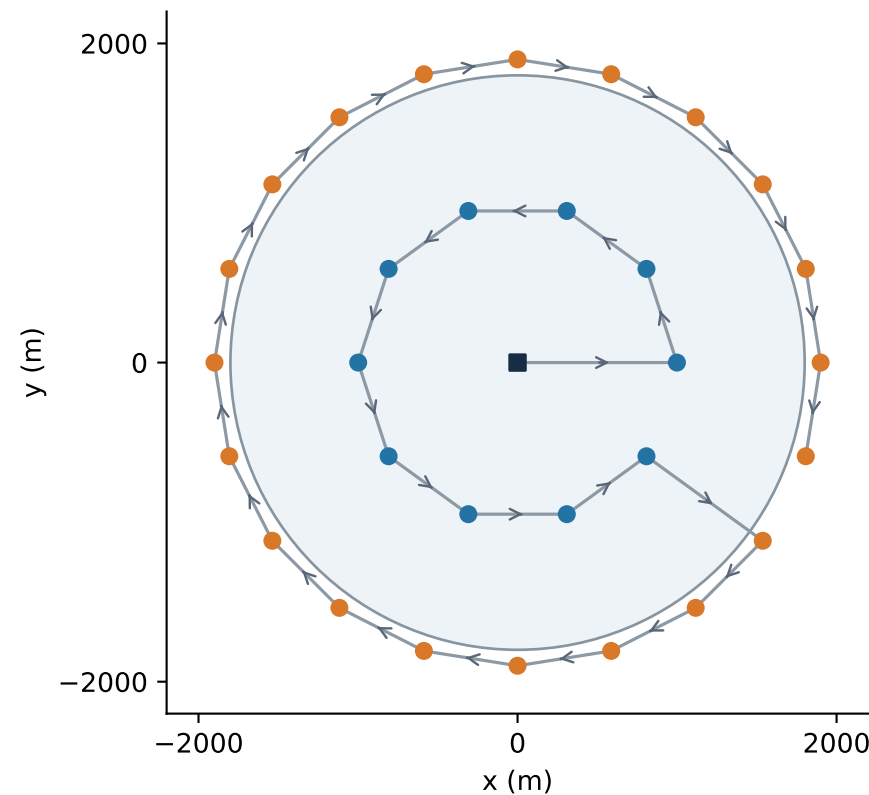

Radial boundary: min 1 outer receivers
Angle share with 2+ receivers: 5.1%

ring 28
3,744.5 s pure movement

Radial boundary: min 2 outer receivers
Angle share with 2+ receivers: 100.0%

ring 31
3,750.3 s pure movement

Radial boundary: min 2 outer receivers
Angle share with 2+ receivers: 100.0%

Boundary model: source radius 1800 m, emission exactly outward, reception radius 1000 m.
This geometry does not guarantee two observations elsewhere, successful localization, or lower total time.
